Project background

Waze's data team is near the end of the churn project. The following tasks are needed to complete the project:
- Model building
- Model evaluation
- Summarize findings for cross-departmental stakeholders within Waze

The assignment

Create the final machine learning model for the churn project. These final tasks include feature engineering, model development, and evaluation.

Specific project deliverables

- Design and implement the following machine learning models: random forest and XGBoost
- Create an executive summary to share your results with cross-departmental stakeholders within Waze
